

# FUNCTIONS & SCRIPTING - ADVANCED

The international certification for leading data specialists

This course has been developed for more experienced Data Analytics Specialists or Senior IT Auditors who have already achieved ACDA Certification and want to refine their skills and increase their knowledge. The two-day course teaches many useful functions not covered in any of the earlier courses and includes advanced scripting techniques. These skills further enhance the overall data analysis capabilities and assist with the automation of routine analytics to free up time for tasks that require critical thinking and judgement.

## KEY OBJECTIVES

- Determine how best to terminate a loop.
- Find similar supplier names and addresses.
- Find incorrectly captured bank account numbers.
- Verify the validity of credit card numbers.
- Find split invoices.
- Determine an individual's age to the exact day.
- Automatically import an undetermined number of files of identical structure.
- Automate flat file imports.
- Split large tables into smaller tables based on predetermined criteria.
- Compare data across multiple records.
- Use data filters and static conditional fields.
- Perform recalculations on more complex tables
