

SCRIPTING

The second step towards the internationally recognized ACDA certification

This five-day course builds on the existing skills learnt in the ACL Functions and Foundations course. You will learn how to use ACL Analytics scripts to gain new insight into your data and do more in less time. Our ACL Certified trainers will show you how to implement scripts into your daily routine to automate recurring ACL Analytics tasks. They will guide you through activities that illustrate how to work with scripts efficiently and easily to preserve best practices, which prevents errors, and results in better controls. By freeing up time you will be able to investigate your data in ways you haven't thought of and concentrate on activities that require critical thinking and judgement.

KEY OBJECTIVES

- Create, edit and run scripts
- Set ACL program options in scripts
- Call scripts from other scripts
- Define computed fields
- Create and use variables
- Designing simple, conditional, and nested groups
- Use variables in groups
- Providing user input in scripts
- Build user dialog boxes
- Do error trapping
- Apply best practices for planning, designing, building, testing, and maintaining scripts
- Automate your analysis
- Schedule tests to run any time of the day or night

WHO

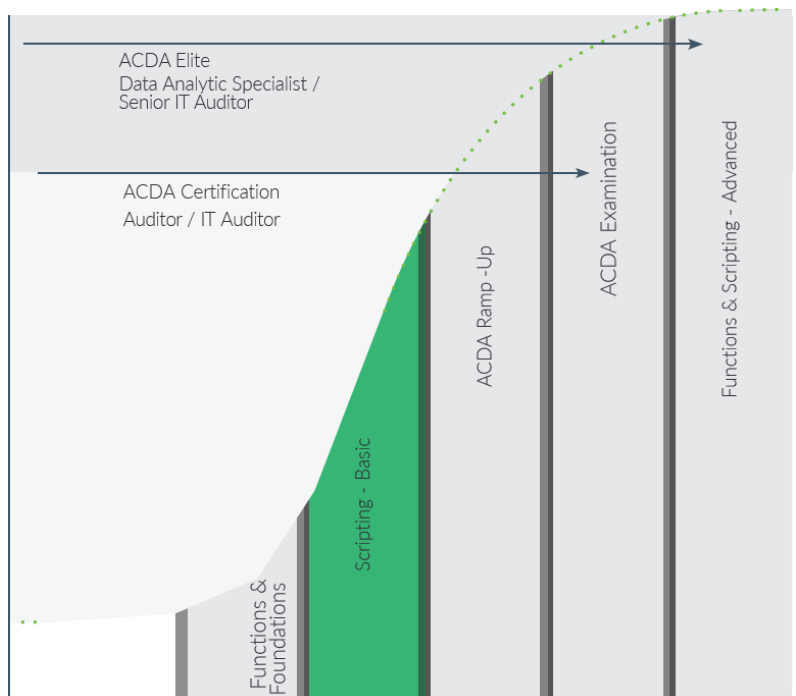

People who have completed ACL Functions & Foundations training

WHAT

5 day training course in a classroom style setting

HOW MUCH

R11,800 excl VAT per delegate
