

# How do you identify your biggest IT compliance & cyber security governance risks?

**Tip:** Use an IT compliance framework to identify the “crosswalk” intersection of controls that matter most for your industry and regulations.

You have a long list of huge risks lurking around IT compliance and cyber security governance. How do you go about tackling them? In simple terms:

1. Define controls

2. Test controls

3. Attest

Now rest easy, right? Unfortunately, it's not quite as easy as one, two, three ...

While IT standards like NIST, ISO and COBIT simplify the undertaking (let's face it, if you don't follow a framework, you may miss controls to comply with critical requirements), spending time on non-applicable requirements is a bottomless drain on resources.

## There is good news.

Several IT compliance framework providers offer a “crosswalk” (or intersection) map of controls specific to industry and regulations. They'll help you cover the most material risks for your industry and help you make sure you don't miss critical IT compliance requirements—even the ones you didn't know existed. Get a head start with a targeted list to zero in on your biggest cyber security risks faster, with no more misdirected resources.

Explore this round-up of IT compliance framework providers identified by GRC analyst firm GRC 20/20 Research<sup>1</sup> to see if there's a fit for you:

- AlienVault
- C2C Smart Compliance
- CERTStation
- Cloud Security Alliance
- Cyveillance
- Dell SecureWorks
- Exodus Intelligence
- Exploit Database
- FireEye
- IBM X-Force
- IID ActiveTrust
- InfoArmor
- Information Shield
- iSIGHT Partners
- McAfee
- Unified Compliance Framework
- Open Security Foundation
- Orange Business Services
- Recorded Future
- Risk Based Security
- SANS Institute
- Secunia
- Security Database
- SecurityGlobal.net
- SecurityScorecard
- Sünnet Beskerming
- Symantec
- Threat Intelligence Pty Ltd.
